### **Response to Summit on Practical Alternative Energy (SOPAE) Conference - Enthusiastic!**

A quick assessment of public response to the Summit on Practical Alternative Energy scheduled for October 6<sup>th</sup> in Joshua Tree, California leads the committee to estimate that slightly over 200 will be in attendance this first year. Committee members attribute the enthusiastic response to its excellent line-up of presenters and exhibitors.

Companies such as Siemens Power Generation, Energy Innovations, Bergey Windpower and Sun Technics are joining forces to help Conference attendees understand what alternative energy technologies are currently within the grasp of residential and commercial property owners alike. George Collard a 29 Palms resident and principal in Logan Energy will present and also exhibit the latest in fuel cell technology. Dr. Joseph Norbeck from the University of California Riverside will present the latest advances in fuel technologies.

Among "exhibit only" participants will be manufacturers and distributors of energy efficient products of interest to every day consumers. Among them LEDtronics with its impressive assemblage of LED lighting products and Construction Supply Mart with its numerous energy saving devices like in-line water heaters. Rounding out the exhibits is the Yucca Valley Branch Library with information on the numerous books available on the subject of alternative energy and Joshua Tree National Park's table-top model of the fully operational solar installation located at its headquarters site in Twentynine Palms.

For additional information about the Conference, visit the web site at [www.sopae.org](http://www.sopae.org).
